Summary

Microsoft has hardened the DCOM requirements in its security update CVE-2021-26414 released on the 8th of June 2021. The hardening changes were disabled by default in this security update, however Microsoft will roll-out the update to all windows version in Q1 2022.

Customers using FTR Monitor on any version of Windows with this security update (CVE-2021-26414) will not be able to connect to FTR Reporter.

With this release of FTR Gold we address the DCOM requirements for Windows in FTR Monitor and also include other bug fixes for version 5.7.1.

- **Log Notes** - Addresses the issue where Log Sheet consumes excessive bandwidth as a result of polling for updates every one second.
- **Manager**- Addresses an issue where make a CD or save a copy of a recording from a Warehouse folder throws an error instead of returning the files from the Warehouse search folder.
- **Monitor** - Addresses an issue where live listen folder was not getting scanned with polling configuration affecting live listen in Monitor.
